SUMMARY	I'm a product designer with a CS degree. I work from user need to shipped interface, and I build what I design, so a prototype is the real thing rather than a picture of it.		
EXPERIENCE	Shipyard	December 2025 - February 2026	
	UI/UX Designer		
	- Designed end-to-end UI in Figma for a live hackathon project showcase and judging platform, defining the color system, typography, and prototypes through to production. - Watched judges and participants work through the platform during live events and in feedback rounds, folding what tripped people up back into the next iteration of the flows. - Split the interface by role across 12 hackathons, with the largest drawing about 200 submissions, giving judges dense forms built for throughput while visitors got a submission flow and project browsing.		
	Suma Solutions	January 2025 - September 2025	
	Design Engineer		
	- Put enrollment table filter state in the URL so administrators could share a filtered view directly, replacing a workflow of screenshots and verbal instructions. - Built the full state matrix for the enrollment table, covering empty results, pagination past 5,000 rows, and error cases, so administrators never hit a blank screen.		
	ACM@SFSU	April 2025 - December 2025	
	Design Chair		
	- Owned ACM@SFSU's visual identity end-to-end as the sole designer, producing social graphics, event flyers, and branded merchandise during a period of declining campus enrollment. - Produced 20+ pieces across formats over eight months, building on the existing ACM design language and leaving every file as a documented template so the next chair could keep the identity consistent.		
PROJECTS	Migaki	August 2026	
	Design Engineering		
	Open source design skill giving AI coding agents a maintained sense of visual taste. Sole author: wrote the three-file taste layer, built the pipeline that keeps it current, and shipped it as an installable Claude Code plugin.		
EDUCATION	San Francisco State University	December 2025	
	B.S., Computer Science		
	Design Officer, SF Hacks: prototyped the landing page, designed its animations, and mapped the site's user flows.
